

Boost productivity and efficiency with Dragon Medical One

Cloud-based, HITRUST CSF-certified clinical speech platform for documenting care in the EHR and beyond.

Clinicians, not technology limitations, should dictate the patient story.

With Nuance Dragon Medical One, your staff can stay productive whether they're at the workstation or anywhere else. Our clinical speech recognition and in-workflow documentation guidance provides a consistent experience at the hospital, clinic, office, and home, as well as on the road.

The world is your workstation

Using a secure desktop app, clinicians can use their voice to securely capture the patient story more naturally and efficiently, and on their own terms. Dragon Medical One provides a consistent and personalized clinical documentation experience that spans solutions, platforms, devices, and physical locations.

Conversational AI backed by virtual assistant capabilities

To further improve the patient and provider exam room experiences, Nuance leads the industry in conversational intelligence with virtual assistant capabilities embedded in Dragon Medical One. This collaborative technology is powered by deep learning and conversational AI to augment speech recognition capabilities.

Higher-quality documentation with greater clinician productivity

- **Always available:** Dragon Medical One is designed for speed, accuracy, and flexibility, with personalized vocabularies and templates that can be accessed and shared across the widest range of devices in the industry.
- **Easy to install and maintain:** No complex configurations; clinicians can begin dictating in less than five minutes using your existing infrastructure. Automatic updates mean less work for your IT staff and less hassle for your clinicians.
- **Greater accuracy and automatic updates:** Using the latest deep-learning techniques and neural-network technologies, Dragon Medical One achieves 99% accuracy with no voice profile training required, and a single cloud-based profile that is auto-established at first use. Activities that were once manual, such as accent adjustments and microphone calibration, are now automatic, providing greater accuracy, a lower word error rate, and an optimal experience from the start.

A secure platform that speaks to everyone

- Designed with virtualization in mind, it integrates seamlessly with your existing EHR.
 - Clinicians are more productive with fast, accurate, and responsive dictation.
 - The documentation process is consistent and personalized across devices.
 - Virtual assistant skills automate high-value clinical tasks.
 - Secure wireless microphone app supports even greater portability.
 - Access in-workflow guidance through integrated CAPD across specialties and care settings.
 - More complete narratives lead to faster reimbursement.
 - Provides data, analytics, and insights to inform better decisions.
-

Dragon Medical One is all about portability, personalization, access, insights, and compatibility

A single voice profile across platforms and devices. Get clinicians up and running immediately across clinical workflows, care settings, devices, and apps for a seamless, consistent, and personalized voice experience.

Portability to work at any workstation. Dragon Medical One provides secure, accurate, and portable cloud-based clinical speech recognition across a wide range of Windows devices. When paired with PowerMic Mobile, Nuance's secure wireless microphone app, clinicians have even more freedom to dictate from virtually anywhere.

Built-in productivity tools. Dragon Medical One comes standard with built-in productivity tools and access to speech-enabled workflows in supported mobile productivity apps, at no additional cost, including Dragon Medical Clinical Calculators.

Embedded virtual assistant capabilities. Clinicians can now retrieve clinically relevant information with clinical content search using UpToDate® by Wolters Kluwer. This integrated skill allows users with UpToDate Anywhere licenses to ask natural language questions such as “Hey Dragon, search UpToDate for pediatric hypertension treatment options,” and “Hey Dragon, what are common symptoms of rosacea on UpToDate?”

Integrated CAPD. Dragon Medical One users with access to Dragon Medical Advisor enjoy greater benefits from evidence-based guidance when adding important details to existing diagnoses and discovering evidence of undocumented and unspecified diagnoses.

Greater flexibility with resiliency mode. Protects against interruptions and allows clinicians to use basic speech services in the event that there is no connectivity to the Nuance Management Server (NMS) database.

Hands-free convenience with wake-up word and always listening. Offer clinicians better control, ease of use, and greater freedom, allowing them to simply say “Hey, Dragon” to turn on the microphone, and completely eliminate the need for manual controls or clicks with always listening.

Actionable insights. A self-service portal provides utilization data, adoption trends, and peer benchmarking tracking to ensure user efficiency and help with the design of action plans for improvement. These metrics help organizations identify opportunities to maximize their technology investment.

When people aren't talking to Dragon Medical, they're talking about it

“We were looking for a scalable, enterprise-wide clinical documentation solution. Nuance not only met that criteria but also could provide a strong technology foundation to improve provider efficiency and enable timely documentation in the patient record.”

Jonathan Shoemaker
