Efficient workflow solution
- Excellent workflow management for increased efficiency
- Part of Philips dictation solutions for seamless integration

№1

In professional dictation

No 1 in SPS global customer satisfaction survey 09/2015.

Highlights

Constant file access

Access all your dictation files anywhere, anytime. Even without Internet access, you can still work in local mode and synchronize all your dictation files when you are online again.

Easy set-up and local support

Setting up SpeechLive is quick and easy. The fast and intuitive installation process ensures you are ready to go within minutes. If needed, authorized SpeechLive partners will offer local support and assistance.

Web browser-based workflow management

The workflow can conveniently be managed from your web browser. No need to install any complicated software. Settings can be re-adjusted anywhere, anytime.
For working even quicker and more accurately, the brand new ergonomic foot control can be integrated seamlessly. It enables transcriptionists to start and stop playback with a slight movement of the foot tip.

Securely stored online

SpeechLive offers highly secure online storage, keeping your files safe from unauthorized access. The solution works with maximum connection security using the HTTPS protocol. All stored data is automatically encrypted and server mirroring keeps your data reliably secured and available anytime.

Double encryption in real time

To avoid unauthorized access, dictation files are encrypted in real time. The highest encryption standard available is used to protect your data, even during upload and download. Files can be encrypted for a third time if recorded in the DSS Pro format for maximum security.

Backup and restore function

The automatic backup function protects your data against accidental loss. Your dictation files are always safe, even if your computer crashes, you suddenly lose Internet connection or unintentionally erase your data.

Independence from local infrastructure

With SpeechLive you are ready to go – no local server infrastructure is required. Enjoy the full benefits of the solution right away, no matter if you are a one-man business or run a company with several employees. Your files are always available independent from changes to your IT environment.

Flexible subscriptions

SpeechLive adapts to suit the needs of your business by giving you the opportunity to adjust the number of users at any time. It now supports up to 50 users per account. SpeechLive offers flexible subscription options, making sure the solution always fits your budget requirements.

Optional transcription service

Philips SpeechLive transcription service now does the typing for you. It even offers the transcription of multi-speaker recordings involving two or more persons.
Get finished documents in three easy steps. First record, second send, third, receive the finished document. It is as easy as that and saves you valuable time, increasing the efficiency of your work life.
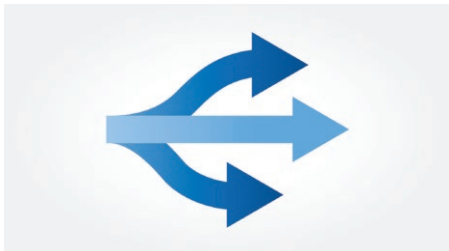

Highlights

Optional speech recognition service

The speech recognition service allows you to get more work done, in less time. Simply dictate your notes or tasks into your Philips voice recorder or dictation recorder app and have your files transcribed almost immediately by our sophisticated software.

Excellent workflow management

Adapt the solution to your company's way of working. Administrators can easily define authors and typists, as well as assigning the workflow from anywhere in the world, to balance workload.

Part of Philips dictation solutions

SpeechLive can be used with Philips voice recorders, your smartphone, or even both at the same time. The Philips dictation recorder app is part of each SpeechLive subscription. No matter if you are using a voice recorder or your smartphone, you can professionally record, edit and send recordings for transcription directly from your device.
